

I am commenting on the replacement of FM translators by LPFM stations. I currently listen to a station that uses a FM translator. The station, AIR 1, a christian radio station is family friendly and helps bring balance to the community. If this station were displaced, the local community would lose a vital voice in the moral fight against some of the garbage that is broadcast on the radio waves. The service provided by this station helps and uplifts all who listen. There would be many people, who are in dire need of the uplifting material played on the station, left with no hope in their lives.
